Address: 10116 W. Wilshire Blvd., Yukon, OK 73099

Payment accepted: Visa, Mastercard, Pay Pal, Checks

Shipping Method: We ship most orders by FEDEX 3-day ground

We can take orders 12 months per year. Upon receipt of payment, you will receive a written copy of the order and payment received. Because we grow and sell a great diversity of perennial plant material, we get very busy in the spring with retail sales and we ask each customer to e-mail a reminder to us at least one week in advance of desired shipping date. It has been many years since I shipped international so I do not know how much additional cost that would be, but would be willing to do it if the order was large enough.

Pricing for new intros is for single fans, if a smaller fan is attached it will be a bonus. New intros will receive a previous intro as a bonus, our choice, not more than three years old. Orders for doubles will receive a double as a bonus, singles orders will receive singles as bonus.

Intros more than one year old will be shipped as double fans unless told otherwise. Intros costing more than \$35 each will receive a bonus plant, our choice.

Plants costing less than \$30 will be shipped w/o bonus plants

Our nursery is located in central Oklahoma, and we have a growing zone of northern zone 7 to southern zone 6. Our average winter low temperatures are between minus 4 or 5 and plus 10 degrees with very little snow and a lot of wind. Ha! I like to start shipping around the middle of March if weather permits here. That is when our dormant plants begin to grow. The sooner we can ship, the less growth we have to remove and the more total energy we can ship you with the plant. We will ship through mid-June. We can ship later some years depending on the weather. It can get to 100 degrees plus here in central Oklahoma on a regular basis during the summer. We normally resume shipping in mid to late August. We try to get at least some of our beds re-lined out during late August and September. Those plants will need six to 8 weeks to re-establish before I like to ship them. If you want to receive a shipment in the fall, please notify us as early as possible so we can take care of your needs.

I specialize in developing tetraploid dormant doubles. The double characteristic in daylilies, especially in Tets. Is very complex, with many factors influencing the process. Genetics is a major factor but in my 30 plus years, no variety will double every time, at least not in growing zone 7 and north. Temperature plays a major role, as does the number of hours of sunlight and the overall energy level in the plant when it blooms. The hotter the temperature and the more hours of sunlight, the better the plant will double. I recommend that every one plant their doubles in full sun to take advantage of your light and temperature factors I also recommend keeping the plants in a good growing condition, not stunted by drought or lack of fertilizer. Over the years I have produced hundreds of double seedlings that only bloomed at the first or end of a scape's bloom cycle. I have had many seedlings that only bloom double on the rebloom scape. I try to find doubles that will bloom double throughout the bloom cycle. I have had many doubles that were developed in growing zone 8 and 9 that bloomed double very little for me so that is why I feel that light, temperature and energy levels are major factors in a cultivar's ability to double in any location.

If you have any other questions, fell free to e-mail me.
